CATALOGUE OF PLANTS

IN THE

GOVERNMENT BOTANIC GARDENS,

SYDNEY,

NEW SOUTH WALES.

1895.

[C. Moore] 47643
99

By Authority:

SYDNEY: CHARLES POTTER, GOVERNMENT PRINTER, PHILLIP-STREET.

IN reissuing a Catalogue of the plants of the Sydney Botanic Gardens, the principal object is to provide a ready means of ascertaining their names and native countries; to facilitate exchanges with all those interested in Botany and Horticulture in this and other countries—to whom the possessions and wants of this establishment will thus be made the more obviously apparent.

Considerable difficulties have been experienced in ascertaining the correct botanical names of the numerous plants introduced by horticulturists under provisional garden-names. In all cases where these plants could not be identified with scientifically described species, the abbreviation "Hort." (for Hortorum) has been put instead of the Author's name, in accordance with the usual custom.

All tender plants that cannot be cultivated out of doors in Sydney climate are marked with an asterisk (*).

Plants and seeds of most of those enumerated may be at all times exchanged on equitable terms, but the list as a whole must be regarded as only complete to date of issue, as changes are constantly occurring, both as regards genera and species, through losses sustained by climatic and other causes as well as by acquisitions new to the collection from various sources.

The system of exchange does not apply to the large number of trees and shrubs supplied for purely public purposes throughout the country.

CHARLES MOORE,
Director.

Government Botanic Gardens,
Sydney, New South Wales.

INDEX OF ORDERS AND GENERA.
